

# Mousetrap Motion Mount User Guide

# Location of Features

(Mousetrap shown in retracted position)

Docking Station (available from PMT)

Mousetrap

Slide tension adjustment (located on both sides of Mousetrap)

-By adjusting the slide tension, users can set the friction or resistance the Mousetrap has against linear travel. Default from the factory is set relatively loose as a safe guard to allow auto-retraction in the event of collision. Use a 5/32" allen key and turn clockwise to increase slide tension.

Slide release trigger (behind front pull handle)

-Used to position the laptop closer to user for better ergonomics and reduced strain.

Console (available from PMT)

(Mousetrap shown in extended position)

## Swing tension adjustment

-Swing tension adjustment sets the resistance to swing the Mousetrap left and right. Using a clutch type UHMW spacer between the Mousetrap and mounting location, users can either tighten to increase resistance, or loosen to reduce resistance of swing. Use a 7/32" allen key, and 9/16" hex wrench on nut under mounting surface to adjust.

## Swing travel adjustment

-Swing travel adjustment is a way for users to limit at time of install, the amount of swing they wish to allow the Mousetrap to have. It can also be used to bias swing travel to favor either driver or passenger travel, or can be used to lockout swing completely. Simply adjust positioning of the stop bolt, or add additional stop bolts within the arc to satisfy your needs.

## Normal Use Adjustments

Squeeze release trigger

To swivel the laptop, simply turn the laptop independently of the Mousertrap. It will swivel on a clutch type UHMW spacer that sits atop the Mousertrap. Depending on your setup, there likely will be a fixed wedge tilt that positions the laptop at a comfortable angle for typing.

Swivel adjustment

Extend Mousertrap
